Endocrine produces hormones —

Adrenaline — insulin — Normal glucose level —  
 Glycogenesis — formation of — glycogen stored  
 form of glucose — glycolysis — Cells have

The cells needs <sup>BV</sup> ~~insulin~~ —

The glucose in the blood increases, the  
 brain tells the pancreas to produce insulin —  
 The insulin binds the cells by receptors act as  
 a precursor to allow the glucose to get into  
 the cells #

A transport protein that requires a precursor

11:26

Pituitary ————— ketone/uric.

# Cardiovascular system — it transports
